PAPER NUMBER

ART UNIT 3736

DATE MAILED: 10/01/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

FIRST NAMED INVENTOR

Brian D. Zelickson

Office Action Summary		Application No.	Applicant(s)		
		10/633,820	ZELICKSON ET AL.		
		Examiner	Art Unit		
		John P Lacyk	3736		
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status					
1) 🗌	Responsive to communication(s) filed on				
2a) <u></u> □	(2a) ☐ This action is FINAL. 2b) ☐ This action is non-final. 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is				
3)					
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.					
Disposition of Claims					
4) Claim(s) <u>1-74</u> is/are pending in the application.					
4a) Of the above claim(s) is/are withdrawn from consideration.					
5) Claim(s) is/are allowed.					
6)⊠ Claim(s) <u>1-74</u> is/are rejected.					
7) Claim(s) is/are objected to.					
8) Claim(s) are subject to restriction and/or election requirement.					
Application Papers					
9) The specification is objected to by the Examiner.					
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.					
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).					
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).					
11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.					
Priority under 35 U.S.C. § 119					
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of:					
1. Certified copies of the priority documents have been received.					
2. Certified copies of the priority documents have been received in Application No					
3. Copies of the certified copies of the priority documents have been received in this National Stage					
application from the International Bureau (PCT Rule 17.2(a)).					
* See the attached detailed Office action for a list of the certified copies not received.					
Attachment(s) 1) Maleira of References Cited (RTO 802)					
1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413) 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) Paper No(s)/Mail Date

Paper No(s)/Mail Date 6)					

Application/Control Number: 10/633,820

Art Unit: 3736

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Page 2

2. Claim 67 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 67, "at least one antenna" lacks positive antecedent basis since independent claim 63 defines a plurality of antennae.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-24, 31-52 and 54-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sogawa et al in view of Abele et al.

Sogawa et al disclose a device having an antenna device surrounded by a balloon-like member, with tubes for feeding and draining a cooling liquid to and from the inside of the balloon, the antenna connected to a microwave source of energy for heating of tissue (column 1, lines 13-23; column 1, line 59- column 2, line 20; column 3, lines 8-29 and column 3, line 53- column 4, line 3). Sogawa et al lack an insertion device having a proximal and distal end, wherein the insertion device (an endoscope, for example) is capable of insertion into a body opening. Abele et al disclose a device for treating

Page 3

tissue inside a patient's body having an antenna device surrounded by a balloon member, with tubes for feeding and draining a cooling liquid to and from the inside of the balloon, the antenna connected to an RF source of energy for heating of tissue, and further comprising an insertion device in the form of an endoscope (150 and column 1, line 27- column 2, line 2; column 3, line 45- column 4, line 16 and column 6, lines 9-26). Therefore a modification of Sogawa et al to provide device through an endoscope would have been obvious to one skilled in the art in view of Abele et al as an alternative means of positioning the energy source or antenna element adjacent tissue to be treated and as a means for observing or viewing the tissue before, during and after the treatment.

Further with respect to claims 2-3, 11-12, 19-20 and 54, Sogawa et al, disclose the output power of the oscillator (energy source) can be on the order of 10-200 watts, and that the desired temperature of the tissue being treated (heated) is controlled by this power, the rate of flow of the circulating fluid, and a temperature sensor feeding a signal to an automatic controller. Thus it would have been obvious to one of ordinary skill in the art that the Sogawa et al device is capable of heating the tissue to between 63-65 degrees C (or 50-70 C) in a time period between 1 microsecond and 1 minute, as required by the procedure.

Further with regard to the specific tissue this is directed to the intended use of the device and as such fails to provide any further patentable limitations. With regard to claims 6-8, 14-16, 21-22, 24, 34-39, 47, 51-52 and 58-62, Sogawa et al further discloses a means for cooling surface tissue to prevent tissue damage while the energy

Art Unit: 3736

transmitting device radiates energy by circulating a fluid through the device and controlling its rate of flow, wherein the means for cooling dissipates heat generated in the surface tissue to maintain a temperature below 50 C in the surface tissue (column 3, lines 8-29). For claim 43, Sogawa et al discloses a source frequency of 300-3000 Mhz, which is the UHF band of RF and overlaps the microwave range (column 2, lines 12-18). For claims 40-41 and 45-46, Sogawa et al teaches a linear dipole antenna which by design radiates into a 180 degree angle or in the "forward direction", thus a "directional antenna".

5. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain <u>a</u> patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

- 6. Claims 53, 63-74 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-12 of prior U.S. Patent No. 6,604,004. This is a double patenting rejection.
- 7. Claims 25-30 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-6 of prior U.S. Patent No. 6,073,052. This is a double patenting rejection.
